In-Line Booths

An in-line booth is surrounded by other booths on three sides, with an aisle along the front. The booth shown in the photo above is a standard 10x10 in-line booth, with 3' side drape and 8' back drape.

- 10x10: One standard booth space, surrounded by other booths on three sides.
- 10x20: Two 10x10 booth spaces combined into one larger in-line booth.
- 10x30: Three 10x10 booth spaces combined into one larger in-line booth.
- 10x40: Four 10x10 booth spaces combined into one larger in-line booth.
- 20x20: Four 10x10 booth spaces arranged together to create a 20x20 booth.

*Most 20x20 booths are priced as 2 inline booths and 2 corner booths at the end of an aisle.

Corner Booths

A corner booth is located on an aisle and is open on two sides, giving the exhibitor additional exposure from the aisle. A corner booth can be any size, depending on its location on the floor plan.

End Cap Booths

An end cap booth has two corners facing separate aisles and open on three sides. The size of an end cap depends on its location and the floor plan.

Most 20x20 booths are end caps, but 10x20 end caps are also available. Both 20x20 and 10x20 end caps have two corner spaces because they have two exposed corners along the aisle.
